Summary

Software Engineering Student | Frontend Engineer | Open-Source Contributor|Javascript Developer

Results-driven frontend engineer with a strong command of JavaScript, React.js, and modern web technologies. Adept at building high-performance, scalable web applications with a focus on intuitive user experiences. Published two npm packages, contributing to the developer ecosystem, and actively engage in open-source projects, including Hacktoberfest. Experienced in working on diverse projects, from SaaS platforms to AI-integrated web applications. Passionate about software-hardware integration, version control systems, and backend development using Node.js. Continuously learning and pushing the boundaries of technology to create impactful digital solutions.

Experience

Association of Software Engineering Nigerian Students , FUTA chapter

January 2025 - Present

Front-End Developer

FUTA,Akure,Ondo State,Nigeria

Served as a frontend developer for the official ASENS FUTA website, contributing to the design and development of a seamless, responsive, and user-friendly interface. Leveraged modern web technologies, including JavaScript, React.js, and Tailwind CSS, to enhance user experience and accessibility. Worked closely with other developers to ensure smooth integration with backend services, optimizing performance and scalability. Played a key role in shaping the online presence of the association, making resources and information easily accessible to members.

Halafund

March 2024 - Present

Front-End Developer

Lagos State

Frontend Developer at Halafund, contributing to the design and development of a user-centric web platform. Spearheaded the implementation of responsive UIs using React.js and Tailwind CSS, ensuring seamless navigation and enhanced user experience. Collaborated closely with cross-functional teams to integrate APIs, optimize performance, and maintain code quality. Focused on delivering scalable and accessible web solutions aligned with modern frontend best practices.

Education

Federal University of Technology , Akure

February 2024 - February 2028(Still In Progress)

Software Engineering

B.Tech

4.02

🔗 <https://www.futa.edu.ng>

Motivated sophomore Software Engineering student with a passion for building user-friendly web applications and solving real-world problems through technology. Proficient in front-end development with hands-on experience in React.js, JavaScript, and Tailwind CSS, with growing interest in backend development and AI integration. Actively involved in hackathons and open-source contributions, including Hacktoberfest. Experience as a Frontend Tutor and member of the Google Developer Groups (GDG) on campus, sharing knowledge and fostering community growth. Committed to continuous learning, collaboration, and delivering scalable solutions.

Projects

Flight Planning System

A comprehensive system for planning flights, including details about available planes and hotels. Users can view plane specifications, book flights, and find nearby accommodations. Built with React

🔗 <https://travel-planner-b64a7.web.app/>

Quiz App

A quiz application that allows users to test their knowledge on various topics. Users can select a category, answer multiple-choice questions, and receive their scores at the end. Built with HTML, CSS, and JavaScript.

🔗 <https://codepen.io/Ibrahim-Abdul-quadri/full/jOjEYyO>

Chatee

🔗 <https://chatee-ob6y.onrender.com/>

a small side project that integrates Google's Gemini API into a chat interface using React. 🧠 It supports both text + image generation, remembers past chats via localStorage, and even compresses image data for performance. Clean UI (React + Tailwind) Rehydrating chat sessions on load Markdown cleanup from Gemini responses Handling prompt logic smartly ("generate image" triggers image output)multi-modal AI + frontend architecture. It includes prompt handling, session design, and GenAI limitations.

Lroomer

🔗 <https://lroomer1.onrender.com/>

a small project called Lroomer – a basic video chat app.

The goal? Practice WebRTC, PeerJS, and Socket io in a real-world use case.

It connects two users randomly in a video call – kind of like Omegle, but minimalist and dev-friendly.

p2ptransfer

🔗 <https://p2ptransfer.onrender.com>

A website that helps with transferring Files on devices that are on the same network

Salat-Time CLI

🔗 <https://www.npmjs.com/package/salat-times>

SalatTime CLI is a simple command-line tool built with JavaScript that allows users to:

✅ Retrieve daily prayer times based on location in Nigeria.

✅ Effortlessly integrate Islamic prayer times into your workflow.
